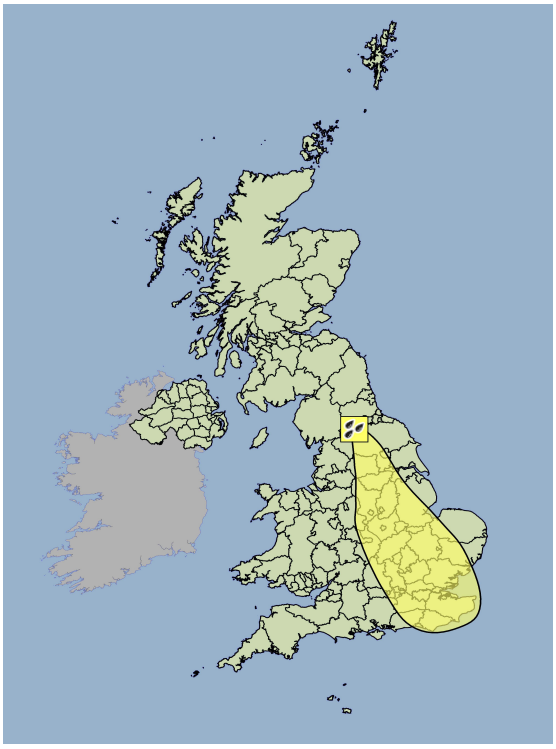
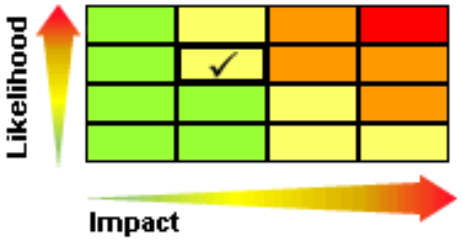
National Severe Weather Warning Service





Chief Forecasters Assessment
A deeply unstable airmass will cover much of eastern and central England today. As daytime heating gets going, showers are likely to develop quite quickly during the late morning and become heavy and thundery in the afternoon. The showers may become organised into narrow slow-moving bands, with some places having over 15 mm of rain in an hour and up to 30 mm in 2 or 3 hours. As often happens in such situations, some places will escape the downpours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Fri, 15th Aug 2014** until **19:00 on Fri, 15th Aug 2014**

Scattered showers are likely to develop on Friday morning and become locally heavy and thundery by the afternoon. The public should be aware of the risk of localised surface water flooding.

The showers should gradually die out from the west this evening.
